

Connector Enhancement

What's New

CyanGate OTMM-FADEL Connector Enhancements
(version 3.7.0)

We're excited to announce the latest enhancements to the CyanGate OTMM-FADEL Connector! Managing your assets and ensuring proper usage clearance is easier than ever.

Streamlined Clearance Check Process – On Demand or Daily

Clearance checks are now on demand. In addition to a daily automatic synchronization, now users can force a clearance check at any time. These checks are also triggered automatically when sharing assets (download or sharing) Quickly visualize the selected assets restrictions and usage permissions.

Visual Alerts for Restricted Assets

Assets are clearly marked, and easy to read, for restrictions and permissions that apply. If any of the assets you've chosen are not cleared, or have restrictions, the clearance check window displays an easy-to-read asset classification. Prompts will alert users when performing actions with assets that have restrictions. It's our way of ensuring you have all the necessary information.

Agreements Information

Clearly visualize your agreements in a concise way. The new Agreements table displays the key information about an asset agreement (s) including Agreement Number, Parties, Roles, Expiration Dates. The table is configurable so the Agreement information that matters to you is displayed. The Asset Rights Table plus the new Agreements table provide all the information you need on an asset and its agreements.

At CyanGate, we value the protection and proper usage of your digital assets. With these enhancements, we aim to provide you with a smoother, more efficient, and more secure experience when working with our OTMM-FADEL Connector. Should you have any questions or need assistance, our support team is always ready to help.
